

FIG. 1 is a schematic diagram of a system 100 for processing a document 102. The system 100 includes a scanner 104, a processor 106, and a storage device 108. The scanner 104 is configured to scan the document 102 and generate a digital representation of the document. The processor 106 is configured to process the digital representation of the document and extract information from the document. The storage device 108 is configured to store the extracted information.

FIGURE 1

FIG. 2 is a schematic diagram of a device 100 in a first state. The device 100 includes a substrate 102 and a layer 104 disposed on the substrate 102. The layer 104 includes a first portion 104a and a second portion 104b. The first portion 104a is disposed on the substrate 102 and the second portion 104b is disposed on the first portion 104a. The device 100 is in a first state in which the first portion 104a and the second portion 104b are in contact with each other.
